4. Email & Notifications
5. SEO & Meta Tags
6. Advanced Settings (reCAPTCHA)
7. CSS Configurator
8. About & Getting Started
9. Quick Reference — Storefront URLs

1. Overview

The GemFind Ring Builder admin panel is available in WordPress under **GemFind Ring Builder**. It controls how the ring builder appears on your site, which shopper tools are enabled, email notifications, SEO metadata, spam protection, and visual styling.

Main admin areas

- **Settings** — General, Display, Email, SEO, and Advanced tabs
- **CSS Configurator** — Colors and preset themes for Version 2 UI
- **About** — Getting started notes and support links

How settings reach the storefront

Saved settings are stored in the plugin database and loaded into the React storefront at `/ringbuilder/`. Most display toggles take effect after you click **Save Settings** and refresh the storefront page.

Status legend used in this guide

Active — fully wired in the current Version 2 storefront

Partial — saved in admin but behavior is incomplete or always-on

Backend — affects emails, browser tab, or metadata only (not visible layout)

2. General Settings

Tab: Settings → General

Setting	Admin Location	What It Does	Frontend Display	Status
JewelCloud Account ID (Dealer ID)	Settings → General	Required connection to your JewelCloud inventory API. Without it, diamonds and mountings cannot load.	Powers all product data on diamond search, mounting search, and detail pages.	Active
Frontend Experience	Settings → General	Choose Version 2 (modern React UI) or Version 1 (classic table UI). Switching from v1 to v2 shows a reminder to review CSS Configurator colors.	Changes the entire storefront UI bundle loaded at <code>/ringbuilder/</code> .	Active
Set Mountings Per Page	Settings → General	Controls pagination size for the mounting/settings listing (12, 24, 48, or 99 items).	Number of ring settings shown per page at <code>/ringbuilder/settings/</code> .	Active
Mounting Listing Default View	Settings → General	Sets whether mountings open in list view or grid view by default.	Initial layout on the settings catalog page.	Active

Setting	Admin Location	What It Does	Frontend Display	Status
Carat Ranges	Settings → General	Comma-separated carat breakpoints used by diamond filter sliders (e.g. 0.1,0.5,1,1.5,2).	Carat filter steps on the diamond search page.	Active
Shop Title	Settings → General	Store name shown in the ring builder header areas.	Large heading above diamond and settings list pages (e.g. your store name under DIAMONDS / SETTINGS).	Active
Phone Number	Settings → General	Contact phone stored in configuration for use in emails and optional display contexts.	May appear in notification emails; not shown as a standalone header element in v2 lists.	Backend

3. Display Settings & Feature Toggles

Tab: Settings → Display

The Display tab controls shopper-facing tools, pricing format, typography, branding, and announcement copy. Feature toggles are ON/OFF switches in the Features grid.

3.1 Feature Toggles

Setting	Admin Location	What It Does	Frontend Display	Status
Drop-a-Hint	Display → Features	Lets a shopper send a gift hint about a diamond or ring to someone else via email form.	Shows Drop A Hint link with gift icon on diamond detail, setting detail, and complete ring pages.	Active
Email a Friend	Display → Features	Allows sharing a product link and message with a friend by email.	Shows Email A Friend link with envelope icon on product detail pages.	Active
Schedule Viewing	Display → Features	Opens a form to request an in-store or virtual appointment to view the item.	Shows Schedule Viewing link with calendar icon on detail pages.	Active
Request More Info	Display → Features	Shows a contact form for questions about the selected diamond or mounting.	Shows Request More Info link with info icon on detail pages.	Active
Print Diamond	Display → Features	Enables a printable diamond details view for shoppers.	Shows Print link on diamond-related detail pages when enabled.	Active
Admin Email Notification	Display → Features	Intended to control whether the store admin receives a copy when shoppers submit hint, email, viewing, or info forms.	No visible UI. Works with Admin Email Address in Email tab. Currently retailer emails may send whenever an admin email is set, regardless of toggle.	Partial
Sticky Header	Display → Features	Intended to pin the top breadcrumb/filter bar while scrolling listing pages.	Headers use sticky CSS by default; the toggle is saved but not yet applied to turn sticky behavior off.	Partial
Show 'Powered by GemFind'	Display → Features	Shows GemFind branding credit at the bottom of the ring builder tool.	Footer text Powered by GemFind. at bottom of storefront pages when enabled.	Partial

Setting	Admin Location	What It Does	Frontend Display	Status
Show Filter Info	Display → Features	Shows small i info icons beside filters and diamond type tabs with explanatory popups.	Info icons on diamond filters, settings filters, and Mined / Lab Grown / Fancy tabs.	Active
Enable Virtual Try-On	Display → Features	Enables virtual try-on button when the product supports it in JewelCloud data.	Virtual Try On button on diamond detail, setting detail, and product cards.	Active
Buy Single Diamond	Display → Features	Allows purchasing a diamond without selecting a mounting first (standalone diamond cart).	Shows Add To Cart button on diamond detail page alongside Add Your Setting and Virtual Try On.	Active
Show Copyright Notice	Display → Features	Intended to show a copyright line in the tool footer or pagination area.	Setting is saved but no visible copyright line is rendered in Version 2 yet.	Partial

3.2 Other Display Fields

Setting	Admin Location	What It Does	Frontend Display	Status
Currency Symbol Position	Display	Places currency symbol left or right of price values (Left or Right).	All prices in listings, filters, cards, and detail pages (\$462 vs 462\$).	Active
Font Family	Display	Sets the primary storefront font (Helvetica, Arial, Verdana, etc.). Choose Other for a custom name.	Typography across the ring builder React app.	Active
Theme Font Family	Display (when Font = Other)	Custom font family name applied when Other is selected.	Custom font on storefront when supported by the visitor's system or theme.	Active
Shop Logo URL	Display	URL to your store logo image for branding contexts.	Used where logo display is implemented in the tool configuration.	Active
Announcement Text (List Page)	Display	Marketing or instructional copy shown on catalog/list pages.	Paragraph under shop title on diamond list and settings list pages.	Active
Announcement Text (Detail Page)	Display	Marketing copy shown on product detail pages.	Text block on diamond detail and setting detail pages above action buttons.	Active

4. Email & Notifications

Tab: Settings → Email / Notifications

Setting	Admin Location	What It Does	Frontend Display	Status
Admin Email Address(es)	Email / Notifications	One or more comma-separated email addresses that receive copies of shopper form submissions (Drop a Hint, Email a Friend, Schedule Viewing, Request More Info).	Not visible on storefront. Triggers backend email delivery when forms are submitted.	Backend

Forms protected by reCAPTCHA (when keys are configured under Advanced): Drop a Hint, Email a Friend, Schedule Viewing, Request More Info, and customer registration. Each successful submission sends confirmation emails to the shopper and notification emails to the addresses above.

5. SEO & Meta Tags

Tab: Settings → SEO / Meta

Setting	Admin Location	What It Does	Frontend Display	Status
Mountings Search — Meta Title	SEO / Meta	Browser tab title for settings/mounting catalog routes.	Updates document <title> when browsing /ringbuilder/settings/.	Backend
Mountings Search — Meta Description	SEO / Meta	Meta description for mounting search pages.	Injected into page meta tags for search engine snippets.	Backend
Mountings Search — Meta Keywords	SEO / Meta	Legacy keywords meta tag for mounting pages.	Meta keywords tag on settings catalog routes.	Backend
Diamond Search — Meta Title	SEO / Meta	Browser tab title for diamond catalog routes.	Updates document <title> when browsing /ringbuilder/diamondlink/.	Backend
Diamond Search — Meta Description	SEO / Meta	Meta description for diamond search pages.	Injected into page meta tags for search engine snippets.	Backend
Diamond Search — Meta Keywords	SEO / Meta	Legacy keywords meta tag for diamond pages.	Meta keywords tag on diamond catalog routes.	Backend

Setting	Admin Location	What It Does	Frontend Display	Status
Diamond Detail Custom HTML	SEO / Meta	Custom HTML or text block inserted on the diamond product detail page body.	Rendered as content block on diamond detail page (above action buttons area).	Active

6. Advanced Settings (reCAPTCHA)

Tab: **Settings** → **Advanced**

Setting	Admin Location	What It Does	Frontend Display	Status
Google reCAPTCHA Version	Advanced	v2 shows a checkbox on each form. v3 runs invisibly with a site badge and score validation on submit.	Spam protection on public contact/share forms in popups.	Active
Google reCAPTCHA Site Key	Advanced	Public key from Google reCAPTCHA admin console.	Loaded by storefront forms to display captcha widget (v2) or obtain token (v3).	Active
Google reCAPTCHA Secret Key	Advanced	Private server-side key used to verify submissions.	Not exposed to shoppers. Validates form posts on the WordPress backend.	Backend

7. CSS Configurator

Menu: **GemFind Ring Builder** → **CSS Configurator**

The CSS Configurator controls storefront colors for Version 2. Version 1 uses a simplified three-color panel (Link, Column Header Accent, Call To Action Button).

Setting	Admin Location	What It Does	Frontend Display	Status
Link Color	CSS Configurator	Color for text links and accent text throughout the tool.	Links, utility actions, and accent-colored text.	Active
Column Header Accent	CSS Configurator	Background/accent for table headers and highlighted panels.	List/table header backgrounds and accent panels.	Active
Call To Action Button	CSS Configurator	Primary button fill and border color (Add Your Setting, Add To Cart, etc.).	All primary pill buttons on detail and listing pages.	Active
Hover Effect	CSS Configurator (v2)	Hover state color for interactive elements.	Button and link hover colors.	Active
Slider Effect	CSS Configurator (v2)	Color for range slider controls on filter panels.	Carat, price, and other filter sliders.	Active

Setting	Admin Location	What It Does	Frontend Display	Status
Background / Background Text	CSS Configurator (v2)	Dark background and text on navigation/header areas.	Top navigation bars and dark header sections.	Active
Nav Active / Inactive Colors	CSS Configurator (v2)	Four colors for active/inactive tab backgrounds and text (Mined, Lab Grown, Fancy, settings tabs).	Diamond type tabs and settings navigation pills.	Active
Select Theme (Presets)	CSS Configurator (v2)	One-click palettes: Default View, Blue Ocean, Ruby Red, Golden Glow, and more. Editing any color switches to Custom View.	Instantly recolors the entire storefront theme.	Active

8. About & Getting Started

Menu: **GemFind Ring Builder** → **About**

The About page summarizes initial setup: plugin activation creates a Ring Builder page at **/ringbuilder/**, dealer credentials are entered under Settings, shoppers browse mountings at **/ringbuilder/settings/** and diamonds at **/ringbuilder/diamondlink/**, and WooCommerce is required for add-to-cart checkout flows.

First-time site registration may show a one-time registration form (name, email, phone) to connect your WordPress site with GemFind support.

9. Quick Reference — Storefront URLs

Page	URL Path	What Shoppers See
Ring Builder Home	/ringbuilder/	Entry point / shortcode mount
Mounting Catalog	/ringbuilder/settings/	Browse and filter ring settings
Mounting Detail	/ringbuilder/settings/view/path/...	Single ring PDP with price, Add Your Diamond, Try On
Diamond Catalog	/ringbuilder/diamondlink/	Browse and filter diamonds
Diamond Detail	/ringbuilder/diamondlink/product/...	Single diamond PDP with specs and action buttons
Complete Ring	/ringbuilder/.../completering	Review selected diamond + mounting combination
